Our Model of “Absolutely No Space Overhead”

tape
11100101

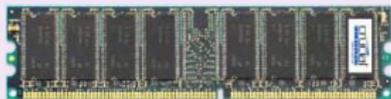

Turing machine

Characteristics

- ◆ Input fills **fixed-size** tape
- ◆ Input may be **modified**
- ◆ Tape alphabet **equals** input alphabet

1. Point out that no markers are used.

Our Model of “Absolutely No Space Overhead”

Turing machine

Intuition

- Tape is used like a RAM module.

Definition of Overhead-Free Computations

Definition

A Turing machine is **overhead-free** if

- 1 it has only a single tape,
- 2 writes only on input cells,
- 3 writes only symbols drawn from the input alphabet.

Overhead-Free Computation Complexity Classes

Definition

A language $L \subseteq \Sigma^*$ is in

DOF if L is accepted by a deterministic overhead-free machine with input alphabet Σ ,

DOF_{poly} if L is accepted by a deterministic overhead-free machine with input alphabet Σ in polynomial time.

NOF is the nondeterministic version of DOF ,

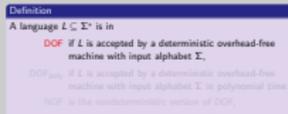

NOF_{poly} is the nondeterministic version of DOF_{poly} .

A Review of Linear Grammars

Definition

A grammar is **linear** if it is context-free and there is only one nonterminal per right-hand side.

Example

$G_1: S \rightarrow 00S0 \mid 1$ and $G_2: S \rightarrow 0S10 \mid 0$.

Definition

A grammar is **deterministic** if
“there is always only one rule that can be applied.”

Example

$G_1: S \rightarrow 00S0 \mid 1$ is deterministic.
 $G_2: S \rightarrow 0S10 \mid 0$ is **not** deterministic.

A Review of Linear Grammars

Definition

A grammar is **linear** if it is context-free and there is only one nonterminal per right-hand side.

Example

$G_1: S \rightarrow 00S0 \mid 1$ and $G_2: S \rightarrow 0S10 \mid 0$.

Definition

A grammar is **deterministic** if “there is always only one rule that can be applied.”

Example

$G_1: S \rightarrow 00S0 \mid 1$ is deterministic.
 $G_2: S \rightarrow 0S10 \mid 0$ is **not** deterministic.

Overhead-Free Languages can be PSPACE-Complete

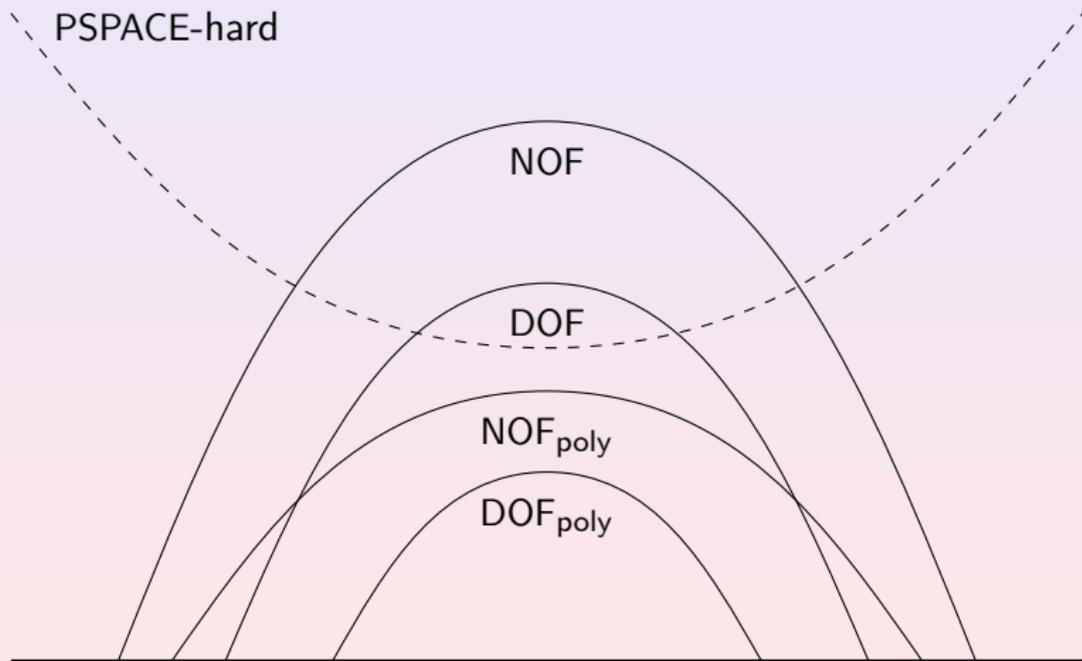

Theorem

DOF contains languages that are complete for PSPACE.

Proof.

- 1 Let $A \in \text{DLINSPACE}$ be PSPACE-complete.
Such languages are known to exist.
- 2 Let M be a linear space machine that accepts $A \subseteq \{0, 1\}^*$
with tape alphabet Γ .
- 3 Let $h: \Gamma \rightarrow \{0, 1\}^*$ be an isometric, injective homomorphism.
- 4 Then $h(L)$ is in DOF and it is PSPACE-complete. ■
